

ASSIGNMENT-4

Ultrasonic sensor simulation in Wokwi

Team ID		PNT2022TM11782	
Title	Gas Leakage Monitoring and Alerting System		
Name	Ramanitharan J		
Minimum Marks	2 Marks		

Question:

Write a code and connections in Wokwi for the Ultrasonic sensor.
Whenever the distance is less than 100cms send an “Alert” to IBM cloud and display in the device recent events.

Code:

IBM Cloud Output:

The screenshot displays the IBM Watson IoT Platform dashboard in a web browser. The browser's address bar shows the URL `d19wub.internetofthings.ibmcloud.com/dashboard/devices/browse`. The dashboard header includes the text "IBM Watson IoT Platform" and a user profile section with the email `913019104028@smartinternz.com` and ID `d19wub`. A sidebar on the left contains navigation icons for various dashboard functions. The main content area has tabs for "Browse", "Action", "Device Types", and "Interfaces", with "Browse" currently selected. Below these tabs are sub-tabs: "Identity", "Device Information", "Recent Events", "State", and "Logs", with "State" selected. A "Showing Raw Data | No Interfaces Available" message is displayed above a table. The table has five columns: "Property", "Value", "Type", "Event", and "Last Received". It contains two rows of data: one for "Distance" with a value of "399.96" and another for "ALERT!!" with a value of "Distance less than 100cms". Both events are of type "Data" and occurred "a few seconds ago". At the bottom of the dashboard, a status bar indicates "0 Simulations running". The Windows taskbar at the very bottom shows the search bar and several application icons.
